ACKNOWLEDGMENT

In the preparation and completion of this work the proponent acknowledges the immense assistance and support of our thesis adviser **Dr. Jonathan Rubio**, who despite being occupied with his many task and job is willing to allot his precious time for the completion of this research study.

As well as **Ms. Janette Bala**, **Ms. Myra Lagat** and **Mr. Michael Guyamin** the members of the thesis review panel for all their suggestions and recommendations that aided and gave the researcher remedies to some matters from the proposal stage until the completion phase of this paper.

Equally, we recognize again the effort given by **Dr. Jonathan Rubio** for his help on our statistical analysis and teaching us the techniques in research method.

We would like to extend our gratitude and appreciation to **Pia Elaine Abes**, **Danna Mae Bondoc**, **Pauline Ambat**, **Kai Redulla**, **Loi Dollete**, **Richard Adano**, **Katelyn Ann Ocampo**, **Alyza Marie Reyes** and **Kamaljit Kaur** who helped us to come up with creative ideas as well as for their support and encouragement.

To almighty **GOD**, the ultimate source of knowledge and wisdom. Forever we will be thankful.

ABSTRACT

Diplazium esculentum is commonly known as vegetable fern or -paco|| in the Philippines. It is commonly found in the lowland forest. It served as food and herbal medicine many people especially in the indigenous community. It serves as their livelihood for it can be sold in the market. But because of too much destruction in the forest, climate change and lack of knowledge of the people regarding the abundance of vegetable fern, it result to gradual loss of its biodiversity and food to other herbivores in the forest. This study was conducted to determine the correlation between the environmental factors in Mts. Palay-Palay, Ternate, Cavite, in relation to the population distribution of the *Diplazium esculentum* from three stations of Mts. Palay-Palay. The research site, Mts. Palay-Palay, Ternate, Cavite, has a total land area of approximately 3518 hectare. The biodiversity of flora which is located in the strict protection zone has a total area of 250 hectare.

Environmental factors and physico-chemical factors were determined and tested using different methodologies. The elevation including height, distance and top of Mt. Palay-Palay in meters were determined using GPS (global positioning system). The rope of belt transect line size is about 100 meter long and was used to determine the distributions of vegetable ferns. Ferns were counted to determine the number of ferns per quadrant. Sample of soil were collected in 3 stations to identify the soil texture, soil pH and soil nutrients (nitrogen, potassium and phosphorus) using soil test kit and USDA guide and was determined at the DLSU-D Biology Research Laboratory. Air and soil temperature were tested using thermometers. Data gathering and statistical analysis were computed using different formulas and was checked by a statistician/research adviser. Herbarium preparations were also considered. The results of soil temperature range from 26-28 C, air temperature ranges from 27-28C. The soil nutrients affect the growth and distribution of species which include nitrogen with low content and potassium with high content and phosphorus with low content. All in all the study ascertains that there exist a correlation between environmental factors and *Diplazium esculentum* in Mts. Palay-Palay, Ternate, Cavite because of the changes in the population distribution of *Diplazium esculentum*.

TABLE OF CONTENTS

Title Page	1
Acknowledgments	3
Table of Contents	5
CHAPTER 1 INTRODUCTION	
1.1 Background of the Study	7
1.2 Conceptual Framework	9
1.3 Objective of the Study	10
1.4 Scope and Limitations	10
1.5 Significance of the Study	11
CHAPTER 2 REVIEW OF RELATED LITERATURE	
CHAPTER 3 METHODOLOGY	
3.1 Research Design	22
3.2 Research Setting	23
3.3 Research Procedure	24
3.4 Data Gathering and Statistical Analysis	26
CHAPTER 4 RESULTS AND DISCUSSIONS	
CHAPTER 5 CONCLUSIONS AND RECOMMENDATIONS	

Cited References	44
