## GRADUATE PROGRAM

### ABSTRACT

Holy Family Academy (HFA) enrollment system is developed to respond to the current problems of the school. The problem includes the following difficult task of manually monitoring and tracing the personal records of the student based on their application, students credentials including F-137 (report card), F-138 (transcript) and birth certificates, monitoring and processing of students accounts of payments and year level. In developing the system, prototyping model is used. In order to develop a system the proponents first analyze the existing system then designing, coding, testing and maintenance was used. To finish the system, step-by-step process was observed. One of the main goals of the HFA enrollment system is to provide an easier and faster way of saving, retrieving, editing data needed to execute the school by creating such database for the data and information to be stored.

The systems goal is to perform order and precise processing in the shortest time possible. Thus, the true rewriting data to be place on a more productive use of the system. Hence, giving the school all up-to-the-month total of the cash and report such as registration form that serves as a reference to a particular tuition fee amount from a particular school year be exact.
