Funding Source : Parents

Total Cost : 7,500 Php

Date Started : July 2009

Date Finished : March 2010

This research was carried out to measure the level of anxiety among selected female high school students in public and private schools in Dasmariñas City, and aimed to test the hypothesis if there is a significant difference as to their anxiety level. The researchers have gathered 240 respondents across the year level with age ranging from 11-18 years old using cluster sampling. Descriptive research design using survey comparative method was employed. Using the Screen for Child Anxiety Related Emotional Disorder (SCARED), data revealed that there is no significant difference in the anxiety level among the four sets of respondents but discriminate in terms of the type or nature of anxiety. Recommendations for school wide interventions with the support of teachers and guidance counselors were forwarded.

Table of Contents

Chapter 1. The Problem and Its Background Introduction	1
Introduction	1
Conceptual Framework	3
Statement of the Problem	4
Scope and Limitation	5
Significance of the study	6
Definition of Terms	7
Chapter II. Review of Related Literature	9
The Premises of Anxiety	9
Adolescents as the Critical Stage	14
The Center of Adolescents Life	16
School Related Problems among adolescents	17
Anxiety among Adolescence	20
Anxiety in Classroom	21
Chapter III. Methodology	23
Research Design	23
Research Instrument	24
Research Respondents	24

Research Procedure	25
Data Analysis	26
Scope and Delimitation	27
Chapter IV. Presentation, Interpretation and Analysis of Data	28
Problem 1	28
Problem 2	31
Problem 3	34
Problem 4	37
Chapter V. Summary, Conclusion and Recommendations	41
Summary	41
Conclusion	43
Recommendations	47
Bibliography	49
APPENDIX A	53
APPENDIX B	54
APPENDIX C	58
