ABSTRACT

The objective of this study was to determine whether cinnamon improves triglyceride, total cholesterol, HDL cholesterol, and LDL cholesterol levels in cholesterol induced guinea pigs (*cavia porcellus*). A total of 12 guinea pigs with induced high cholesterol were divided randomly into four groups. Groups T0, T1, T2, and T3. T0 was the control group and therefore did not receive cinnamon treatment. Group T1 consumed 1 dose of cinnamon which consisted of 48 mg. Group T2 had taken twice by receiving two doses. Group T3 had received 3 doses of 48 mg of cinnamon. The Cinnamon treatment was administered daily for one week until blood was collected and analyzed for the results. Results show that Group T3 which had received three doses of the treatment daily had significant differences within the Total Cholesterol, HDL, LDL, and Triglyceride values and suggest that inclusion of cinnamon in the diet of guinea pigs with high cholesterol levels will reduce risk factors associated with cardiovascular diseases.

TABLE OF CONTENTS

Title Page	1
Abstract	2
Approval Sheet	3
Acknowledgments	4
Table of Contents	6
CHAPTER 1 INTRODUCTION	
1.1 Background of the Study	9
1.2 Conceptual Framework	11
1.3 Statement of the Problem	11
1.4 Hypotheses	12
1.5 Scope and Limitations	12
1.6 Significance of the Study	13
1.7 Definition of Terms	14
CHAPTER 2 LITERATURE REVIEW	
2.1 Conceptual Literature	16
2.2 Related Studies	23
CHAPTER 3 METHODOLOGY	
3.1 Research Design	26
3.2 Research Setting (or Instruments)	26

3.3 Research Procedure	27
3.4 Data Gathering and Statistical Analysis	29
CHAPTER 4 RESULTS AND DISCUSSION	
4.1 Results	30
4.2 Discussion	35
CHAPTER 5 CONCLUSIONS AND RECOMMENDATIONS	
5.1 Conclusions	38
5.2 Recommendations	39
Cited References	41
Appendices	
A. Standard Procedure	46
B. Raw Data	49
C. Photodocumentation	54
