ABSTRACT

Alcohol and drug addiction has two main components. One is a need to address a biophysical rehabilitation, for the reason that a person becomes trapped by the physical dependence and cravings for more of the drug. And two is the mental and/or emotional side, where the individual feels he or she needs the drug to function in everyday life. Either way it is the feeling that one must use the drug to continue to work. Despite the fact that the same substance they think is helping them feel better is actually killing them.

The development of the study come up with different ways and instruments, the gathering of data trough survey, interviews, related study, related projects and different research basis. Its development shows that there must be correct and great considerations especially on users and environment in planning an institutional occupancy.

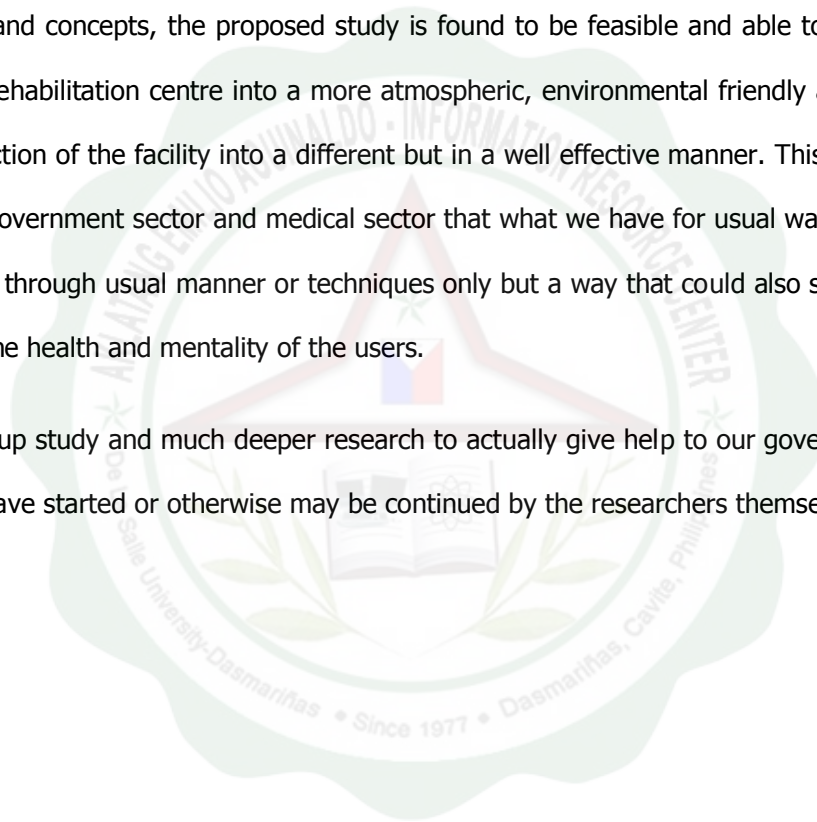

"KASIMULA" a Philippine Drug and Alcohol Rehabilitation Centre will establish facilities that will help to restore the health and life of a drug and alcohol dependent. A person who is under of substance abuse that is willing to change and start a new meaningful life. The outcome of the study accomplished revealed that a need of such facility is prevailed in Laguna and this will be a great help not only on the region with high population of drug and alcohol dependent but also the site where the proposed rehabilitation will be located.

The study aims to control the problem which is our only solution although we may not beat or totally eradicate the issue but at least we have the equipment to control and hold the problem for a while. We claim these words for we knew that our society is in need, this may not be the first but this research will emphasize that we the society as well the government of our country needs more effort to completely ensure the safety of the next generation.

It also aims to touch and secure each other life or a man to man approach and involves the natural environment. The study ignores isolating people but attaching drug and alcohol dependent to start a new life. The design output shows the interaction of human and the environment where it has the realization that there must be the need of rehabilitation based on the current situation issues in drug and alcohol in the society.

The study has brought into life by the lines and concepts, the proposed study is found to be feasible and able to adopt changes to the needs of our time. The idea to convert or redefine the meaning and character of a rehabilitation centre into a more atmospheric, environmental friendly and free type rehabilitation centre was a great idea for we have escaped from the usual and foresee the function of the facility into a different but in a well effective manner. This study is made not to change or contradict to what we have for usual, it is made for us to see specially the government sector and medical sector that what we have for usual wasn't good enough anymore for what this study saw and used is a formula that could answer the problems not through usual manner or techniques only but a way that could also solve the problems through an unusual manner. And for that this study has succeed and proven effective for the health and mentality of the users.

However, this book will be requiring a follow up study and much deeper research to actually give help to our government and medical sector as the researchers pass the rights and honour to continue what the researchers have started or otherwise may be continued by the researchers themselves to make the study a hundred percent well efficient and effective.

Part I.

The Problem and Its Background

Chapter I.1	General Overview	
	Introduction	1
	Background of the Study	3-5
	Statement of the Problem	6
	Project Goals, Objectives and Strategies	7
	Significance of the Study	8
	Scope and Limitation	8
	Assumptions	9
	Conceptual Framework	10
	Definitions of Terms	11-12
	Acronyms	12
Chapter I. 2	Review of Related Literature and Studies	
	Related Literature	13-15

	Related Studies/ Projects (2 local and 2 foreign)	16-30
Chapter I.3	Research Methodology	
	Research Design	31-32
	Methods and Techniques	33
	Population and Sampling	34-40
	Research Instruments	40-41
Chapter I.4	Summary of Findings and Analysis	
	Presentation of Collected Data	42-46
	Need Analysis	46-48
	Qualitative or Quantitative Analysis	49-54
Chapter I.5	Conclusion and Recommendation	55
Part II	Research Focus	
Chapter II.1	Rationale	56
Chapter II.2	Principles and Relevance to the Project	57
Chapter II.3	Application to the Project	58-59
Part III	Site Identification and Analysis	
Chapter III.1	Site Selection Process	
	Criteria for Site Selection	60-61
	Site Option Description	62-67
	Site Selection and Justification	68-70

Chapter III.2	Site Evaluation and Analysis	
	The Macro Setting	71-81
	The Micro Setting	82-86
	Laws and Ordinances Pertaining to the Site	87-89

Chapter III.3	Site Development Options	
	Site Analysis	90-92
	Proposed Site Development Plan (w/ building massing)	93-94

Part IV. Architectural Design Translation

Chapter IV.1	Design Program	
	Problem Design Diagnosis	95
	Design Objectives	96
	Design Criteria (Philosophy, Principles)	96-97
	Design Concept	98-99
	Design Considerations (Laws and Standards)	100-101
	Space Programming & Allocation	102-114
	Behavioral Analysis	115-116
	User Analysis	117-118
	Organizational Structure	119
	Functional Zoning	120
	Programming Matrix/ Diagrams	121-136

	(Adjacency, Inter-relationship, Circulatory)	
Chapter IV.2	Concept Development	
	Architectural Concept (Space and Form Evolution)	137-139
	Structural Concept	139
	Utility Concept	140-142
Chapter IV.3	Synthesis	
Chapter IV.4	Presentation of Drawings	
	Concept Board	
	Perspective (Exterior and Interior)	
	Site Development Plan	
	Floor Plan/s	
	4 Elevations	
	2 Sections
