“Even though I walk through the darkest valley, I will fear no evil, for you are with me; your rod and your staff, they comfort me.”

## Abstract

Today, there are different kinds of diseases, some of which have no cure. In the Philippines, even though we have a large number of hospitals only a few has the capacity to cater to the needs of patients suffering from life-threatening kinds of diseases. Many of our patients apt to go to other countries for treatment which is ironic because even though Filipino doctors are known to be one of the brightest globally.

According to WHO(World Health Organization) report in 2010 published on their website ([www.who.org](http://www.who.org)); globally, South East Asia is second in terms of emergency care for neurological disorders. However, sources are not distributed properly to countries belonging in Asia, specifically in the Philippines.

This study aims to increase the medical economy of the Philippines by providing/building a hospital that would specialize on neurological disorder. In order to achieve the main objective, the following will contribute to the satisfaction of the architectural objectives.
