Tubbataha Reefs Inland Conservation Complex

A Thesis Proposal Presented to the
Faculty of Architecture Department
De La Salle University – Dasmarinas
Dasmarinas, Cavite

In Partial Fulfillment of the Requirements in Architectural Design 9 and
Architectural Design 10 – Architectural Thesis (ARCH521/ARCH521S) for the degree of
Bachelor of Science in Architecture

Presented by:

Calumba, Bob Jr. A.

AY 2013-2014
Abstract

Many people are not aware of what coral reefs contribute to the environment. Just like tropical rainforests’ role on land, they support a phenomenal diversity of species and provide irreplaceable sources of food and shelter. Reefs are key sources of coral and fish larvae, seeding the fisheries in surrounding areas. At least 500 million people rely on coral reefs for food, coastal protection, and livelihoods. Also, many coral species have been used in the treatment of cancer, HIV, cardiovascular diseases, ulcers, and other ailments. These are to name a few of what coral reefs contribute.

Being an archipelago, the Philippines is very lucky to be surrounded by large body of waters inhabited by diverse marine species, especially the Tubbataha Reefs. The 97,030-hectare is one of UNESCO’s World Heritage Sites and is home to no less than 600 species of fish, 360 species of corals (about half of all coral species in the world), 11 species of sharks, 13 species of dolphins & whales, 100 species of birds and also nesting hawksbill turtles & green sea turtles which are now endangered.

Unfortunately, the reefs being blessed with such resources make it a vulnerable target for exploitation. Early 2013, two major foreign ships was stuck in the reefs which caused to more than 4000 sq. m. of healthy corals. Even though Tubbataha is located a hundred kilometers away from the nearest inhabited island, illegal poaching and fishing also is continuous since the late 21st century. These are serious issues that could take away the reefs’ outstanding value and more importantly, the livelihood of the neighboring coastal areas that rely on Tubbataha as the breeding area that seeds their fishing communities.

Given the global significance of the Tubbataha Reefs, the managing arm of the reefs which is the Tubbataha Management Office needs support facilities and a major boost in revenues to sustain its operations throughout the whole park. With this study, a conservation complex is being proposed that aims to help the current problem of the Tubbataha Reefs and its stakeholders, a bigger venue to cater a wider audience for its educational and conservation efforts, a new and more accessible attraction for a boost in revenues, and new technologies and facilities for its enforcement operations.

Certificate of Originality i
Approval Sheet ii
Abstract iii
Dedication iv
Acknowledgement v
Table of Contents vi
List of Figures vii
List of Tables viii-ix

Chapter 1. The Problem and its Setting
  - Rationale of the Project 1
  - Background of the Project 3
  - Project Goals and Objectives 4
  - Significance and Expected Output 4

Chapter 2. Theoretical Framework
  - Review of Related Literature 5
  - Related Studies 6
  - Related Projects 8
  - International Projects 9
  - Local Projects 10
  - Relevance to the Study 12
  - Conceptual Framework/Paradigm 13
  - Methodology 14
  - Site Criteria 14
  - Identification of Key Resource Persons and Data Sources 15
  - Key Resource Agencies 15
  - Presentation of Data Gathered 17

Chapter 3. Site Justification
  - Macro Site Analysis 26
  - Micro Site Analysis 29

Chapter 4. Architectural Design Development and Architectural Engineering
  - Site Planning and Site Programming 51
  - Building Space Program 54
  - Functional Diagrams 56-57
  - Design Conceptualization 58
  - Design Concept 58
  - Design Philosophy 59
  - Architectural Translation of Concepts 60-62
  - Other Design Considerations 63
  - Heliport Design 63
  - Sustainability Strategies 64
  - Harnessing Daylight 64
  - Corrosion Resistance 65
  - Double Glazing 65
  - Solar Panels 66
  - Project Technical Requirements 67-69
