

Development of DLSU-D 3D Campus Map and Vehicle Tracking System using GIS-GPS Technology

A Thesis Presented to the Faculty of Computer Engineering
College of Engineering, Architecture and Technology
De La Salle University – Dasmariñas
Dasmariñas City, Cavite

In Partial Fulfillment of the Requirements for the Degree of
Bachelor of Science in Computer Engineering

Yjona Jezreel P. Medina
Kevin Paul O. Mojica
Aubrey Francia L. Reyes

March 2014

LIST OF TABLES.....	vii
LIST OF FIGURES.....	vii
ABSTRACT.....	ix
Chapter 1 THE PROBLEM AND ITS BACKGROUND.....	1
1.1 Introduction.....	1
1.2 Background of the study.....	2
1.3 Statement of the Problem.....	4
1.4 Objective of the Study.....	4
1.5 Conceptual Framework.....	5
1.6 Significance of the study.....	6
1.7 Scope and Delimitation of the Study.....	7
1.8 Definition of Technical terms.....	8
Chapter 2 REVIEW OF THE RELATED LITERATURE.....	12
2.1 Foreign literature.....	12
2.2 Foreign studies.....	20
2.3 Local studies.....	24
2.4 Relevance of the study.....	29
Chapter 3 RESEARCH METHODOLOGY.....	30
3.1 Research Design.....	30

3.2 Research Instruments	31
3.3 Statistical Tools/Treatment of Data.....	33
3.4 Instrumentation	33
3.5 Methodological Framework.....	34
3.6 System Design	36
3.7 System Operation.....	37
Chapter 4 RESEARCH FINDINGS	39
4.1 System Design of the DLSUD 3D Map and Vehicle Tracking System.....	39
4.2 System Operation.....	40
4.3 Components and their Functions	41
4.4 Hardware Schematic/Connections	43
4.5 Software Controller.....	43
4.6 Source Code Development	44
4.7 Data and Results	45
4.7.1 Acceptability Testing.....	45
4.7.2 Accuracy Testing.....	46
4.7.3 Functionality Test.....	51
4.8 Developed Project.....	67
Chapter 5 SUMMARY, CONCLUSION AND RECOMMENDATION.....	79
5.1 Summary	79
5.2 Conclusion	80
5.3 Recommendation	80

ABSTRACT

DLSU-D 3D Map with Vehicle Tracking System using GIS-GPS Technology is a development project that exhibited the capabilities of Arduino Based Microcontrollers and GIS Technology. The project is designed with a smart interface where the map is created using SketchUp and displayed on LED touchscreen monitor. The user can navigate by selecting from a series of toolbars available on the screen.

The project was created based on three methods: design, simulation and assessment. The project encompassed the use of GIS technology concept through geolocation and mapping. The project also featured real-time data tracking of vehicles, specifically the *ikot* vehicle in DLSU-D, where the GPS tracker collected data and sent it to the main map server to determine a vehicle's location within the campus.

The project is designed for smart navigation of the campus where the visitors as well as the students may be able to locate buildings within the campus. In addition, it will also help them track the *ikot* vehicle for a hassle free waiting time.
