

# **Design and Development of Web Controlled LED Bulletin Board**

A Thesis Presented to the Faculty of Computer Engineering  
College of Engineering, Architecture and Technology  
De La Salle University – Dasmariñas  
Dasmariñas City, Cavite

In Partial Fulfillment of the Requirements for the Degree of  
Bachelor of Science in Computer Engineering

**Mark Lester M. Carranza**

**Melvin A. Miranda**

**Alyssa C. Sangalang**

March 2014

## TABLE OF CONTENTS

<b>TITLE PAGE .....</b>	i
<b>APPROVAL PAGE.....</b>	ii
<b>ACKNOWLEDGEMENT.....</b>	iii
<b>TABLE OF CONTENTS.....</b>	iv
<b>LIST OF TABLES.....</b>	vii
<b>LIST OF FIGURES .....</b>	vii
<b>ABSTRACT .....</b>	viii
 <b>Chapter 1: THE PROBLEM AND ITS BACKGROUND</b>	
1.1 Introduction .....	1
1.2 Background of the Study.....	2
1.3 Statement of the Problems .....	5
1.4 Objectives of the Study .....	6
1.4.1 Specific Objectives .....	6
1.5 Significance of the Study .....	7
1.6 Scope and Delimitation of the Study .....	9
1.7 Conceptual Framework .....	11
1.8 Definition of Terms .....	12
 <b>Chapter 2:REVIEW OF THE RELATED LITERATURE</b>	
2.1 Foreign Literature .....	14
2.1.1 The Arduino Microcontroller.....	15
2.1.2 The Ethernet Shield.....	16
2.1.3 HyperText Markup Language.....	17
2.1.4 Fargo: Control Electrical Devices over the Internet.....	17
2.1.5 PS/2/You: Go-anywhere, LED digital message board.....	18
2.1.6 Web Controlled Arduino LED.....	19
2.1.7 Arduino Web Server LED Control.....	20
2.1.8 LED Based Information Display System with Audio Announcement.....	20
2.2 Local Study .....	21
2.2.1 Microcontroller-based Electronic Bulletin Board Using LED Dot Matrix .....	21
2.2.2 Implementation of LED Matrix Scrolling Message Display at DLSU-D Gate 1 via SMS.....	21
2.2.3 Home security using Zigbee technology .....	22
2.2.4 Microcontroller Based Air Pollution Monitoring System using Zigbee technology with PHP Interface.....	23
2.3 Relevance to the Present Study .....	23

### **Chapter 3: RESEARCH METHODOLOGY**

3.1 Research Design.....	25
3.2 Research Instruments.....	25
3.2.1 Industrial Survey .....	25
3.2.2 Literature Survey.....	26
3.2.3 Data Gathering Procedure .....	26
3.2.4 Statistical Tools/ Treatment of Data .....	27
3.2.5 Instrumentation.....	28
3.3 Design and Experimentation.....	29
3.3.1 Methodological Framework.....	29
3.3.2 Flowcharts of the Design and Development Procedure.....	30

### **Chapter 4: RESEARCH FINDINGS**

4.1 System Design of the Web Controlled LED bulletin board.....	31
4.2 System Operational Procedures.....	31
4.3 Components and their Functions.....	32
4.3.1 Official Website .....	32
4.3.2 LED Dot Matrix .....	36
4.3.3 Speaker .....	36
4.3.4 Microcontroller Unit (MCU) .....	37
4.3.5 Ethernet Shield .....	37
4.4 Pin Configuration, Schematic Diagram and Circuit Layout .....	38
4.5 Controller Software.....	41
4.6 Source Code Development.....	41
4.7 The Developed Project .....	42
4.8 Data and Results.....	43
4.8.1 Acceptability Test .....	44
4.8.2 Functionality Test.....	45
4.8.3 Reliability Test .....	46
4.8.4 Table of Testing Schedules .....	47
4.9 Cost Analysis.....	53
4.9.1 Material Specifications .....	53
4.9.2 Data of Tarpaulin Printing Cost S.Y. 2012-2013 .....	54
4.9.1 Web Controlled LED Bulletin Board.....	55

### **Chapter 5: SUMMARY, CONCLUSION AND RECOMMENDATION**

5.1 Summary .....	58
5.2 Conclusion .....	59
5.3 Recommendation .....	59

### **REFERENCES.....61**

**APPENDICES .....****63**

Appendix A - Source Code for the Hardware's Microcontroller .....	64
Appendix B - Source Code for the Website Using Microsoft Visual Studio 2010.....	69
Appendix C - List of Datasheets and Manuals .....	105
Appendix D - Photo Documentation.....	140
Appendix E - Sample SurveyForm .....	143
Appendix F - Answered Survey Forms .....	144
Appendix G - Letters .....	160
Appendix H - Checklist and Certification .....	165
Appendix I - Gantt Chart .....	169
Appendix J - Curriculum Vitae .....	170

## **ABSTRACT**

In order to create a cost-effective and environment-friendly means of disseminating information within an organization and yet reliability would not be compromised, the researchers designed and developed a system that incorporated the connection between a website and an LED bulletin board. Microcontroller programming, networking and web site development are the basic composition of the research project. A website is created to control the display of the LED bulletin board. The internet is a vital part of this research as it is needed to communicate and connect the site to the microcontroller of the LED board. The test parameters considered in this thesis were power efficiency, reliability, and speed which were all evaluated and proved by the research. The authors adapted the descriptive applied research design to observe the current practices of information dissemination in DLSU-D and to undergo stages such as design, analysis, construction and assessment of the overall system. Actual testing was conducted to justify the acceptability, functionality and reliability of the system.
