

Cavite Information System

A Special Problem

Presented to

**the Faculty of the Department of
Mathematical Sciences and Computer Studies,
College of Arts and Sciences
De La Salle University - Dasmariñas
Dasmariñas, Cavite**

**In Partial Fulfillment
of the Requirement for the Degree
Bachelor of Science in
Computer Science**

Aristotle S. Guevarra

March 1997

ABSTRACT**NAME OF INSTITUTION :** De La Salle University - Dasmariñas**ADDRESS :** Dasmariñas, Cavite**TITLE :** A Cavite Information System**AUTHOR :** Aristotle Sayoto Guevarra**FUNDING SOURCE :** Personal**COST :** 5,000.00**DATE STARTED :** December 1996**DATE FINISHED :** February 1997**OBJECTIVES OF THE STUDY:****A. GENERAL:**

To develop a quality software using the concept of computer-based Information System application.

B. SPECIFIC:

1. To develop a computerized Information System that serves as a compilation of information about Cavite.
2. To provide a quality software that will help researchers in finding the information they need about Cavite.
3. To serve as tool which can be updated for future use.

SCOPE AND COVERAGE:

The Cavite Information System was developed for researchers who want to draw information about Cavite, including maps, heroes, statistical data and graphs by search using a mouse or a keyboard and print the information you need.

METHODOLOGY:

The methods that the proponent used were interview method, research method, and the Waterfall Model for the System Development Process.

OUTPUT OF THE STUDY:

// Cavite Information System was developed to provide information about Cavite using Computer-Based information system. The software included statistical data, historical background, maps, graphs, heroes, biography, and other pertinent information about the province. //

CONCLUSIONS:

The software Cavite Information System was able to gain its objectives on how to give information in a modern approach.

RECOMMENDATION :

The software needs to be updated every year in order to maintain its capability of giving current information about Cavite. The proponent recommends additional information or topics to make the system more complete. Maps and pictures should be changed in order for it to be more presentable to the user. Additional pictures of infrastructure and historical places will make the software more useful. It is recommended in the system to include a database to save old documents. However, the proponent also believes that further improvement of the system can still be made whenever necessary.

This software will run on a Windows 3.1/3.11/95 environment running on a 486DX-33 with 8MB Ram as a minimum requirement. The developer recommends a Pentium 66 with a memory of 8MB RAM or higher.
