## ABSTRACT

Nowadays, Filipino military are considered as one of the “modern day heroes”. Their responsibility is to defend the country from any threats and enemies and to ensure that there is peace and order. As they do their part in the country, the Philippine government supports them with different services and benefits. However, as stated, a problem of one is also a problem of others. There are various issues to be addressed regarding the AFP services and one of them is the housing problem. With almost 124,000 soldiers, existing housing projects that government supported to them are insufficient. This issue was also part in the State of the Nation Address by which the President committed to provide housing units for AFP with the help of housing agencies that formulate a program to support this, the National Housing Authority and AFP Housing Board. In line with this, the project proposal aims to provide a housing program to uplift the lives of the Filipino military during and after their service. It could be another view of creating a community by which further study was done to ensure that this proposal could meet the expected output.

The Proposed Retirement Center for Filipino Military will be a housing project that is supported by facilities and amenities based on the needs and demands of the users. This will be a part of a systematic research and will result to an architectural solution that will be constructed different from other subdivision. It is a housing project that will be beneficial to any rank and status of the military in the service. A retirement home that can be adaptable and accessible to any type of users and their dependents.

This project proposal stands as a retirement home arising from an existing issue and completed by an architectural design solutions. It will be a place dedicated for the Filipino military.

## CHAPTER 1. The Problem and Its Setting

Introduction

1

Rationale of the Project

1

Background of the Project

2

Project Goals and Objectives

5

Significance and the Expected Output

5

Scope and Delimitation

6

## CHAPTER 2. Theoretical Framework

Review of Related Literature

7

Review of Related Projects

13

Conceptual Framework/Paradigm

22

Methodology

23

## CHAPTER 3. Site Justification

Site and Project Development Criteria

31

Macro and Micro Site Analysis

36

## CHAPTER 4. Architectural Design Development & Architectural Engineering

Site Planning & Site Programming

87

Building Space Program

88

## CHAPTER 5. Architectural Design Transition
