ABSTRACT

1/ The ESP information system is designed to automate the Educational Support Program (ESP) of XYZ company's Human Resource Center using Visual Basic version 5.0 as front-end and MS Access '97 as back-end. At present, there are three installed information systems, namely, Library Information System (LIS), Training Information System (TIS) and the Career Development Information System (CaDIS). No attempts have been made to develop an automated system for ESP until now.

2/ The proponents used the prototyping method in developing the information system. The proposed ESP information system focuses on updating of ESP grantees' records, monitoring of tuition fee reimbursements/payments, and report generation. Disbursement of funds (preparation of check payments) will not be covered since another department handles this. 2/
