

## ABSTRACT

### Interactive Multimedia on Food Microbiology

for

HRM Students

This paper deals with the general and specific characteristics of common microorganisms, both useful and harmful, that affect the shelf of food to prevent spoilage and contamination. Creating an interactive multimedia software covering Food Microbiology in its simplest form would benefit HRM students. They could easily grasp the concepts and significance of the said subject. Quality images, videos and a significant amount of information are included in the system for better comprehension of the students. Having the system's interactive, entertaining and enjoyable characteristics, it becomes a useful tool in dealing, educating and informing the users. The data in the system were accurate at the time they were written. They are, however, subject to change due to advancement in technology.
