

ABSTRACT

De La Salle University-Dasmariñas is one of the La Sallian Institutions of Learning of the Brothers of the Christian Schools, a catholic religious congregation founded by Saint John Baptist de la Salle. It is one of the many institutions to adapt the application of Information System.

Over the past years, there was a significant departure from traditional approach to using computer. Computers have become important information-producing tools. There has been recognition of needs that can be productively fulfilled through application of Information System. IS on the De La Salle Univeristy-Dasmariñas (East Campus) Class Scheduling System emerged through time with the purpose of processing data to accomplish its objective. It is an automation of manual class scheduling. Scheduling is an important part in which the university conveys to the enrolled students what they offer, in coherence to the innovative year and semester. Often data accumulates so rapidly and this causes difficulty in managing and extracting information needed in a timely fashion. From a practical standpoint, automation of the scheduling process is more efficient, producing the desired output, performing the right function and improving the speed, done in a matter of minutes.
