

Abstract

CAI in Sociology with Family Planning was developed to aid Junior students of De La Salle University-Dasmariñas. It includes selected topics that deal with the study of Sociology with Family Planning. The software was designed to benefit the students as well as the teachers who will be monitoring the performance of each student using the system. The system will simulate a two-way interaction between the computer and the student where in the selected topics in Sociology with Family Planning was presented in a way that students will not feel bored about the subject matter through the use of graphic oriented programming languages. Furthermore, the software has the ability to give exams from time to time after each Chapter was presented and eventually, the score of the students will be displayed on the screen. Illustration or graphic images are also incorporated in the presentation of the lesson for the students better understanding.
