## ABSTRACT

This thesis is an exposition of Sylvia Hobart's article "On a Characterization of  $t$ -designs in terms of the Inner Distribution."

An inequality for  $0$ -designs is derived which holds with equality, if and only if the design is a  $t$ -design where  $0 \leq t \leq k$ . This inequality is then applied to the case of regular designs; that is designs in which the number of blocks intersecting a given block in a given number of points is a constant. This analysis is used to characterize the Steiner system  $S(4, 7, 23)$  in terms of the derived design at two points.

A thorough discussion on designs as well as the details of the proofs found in Hobart's article are presented in this thesis. Examples are constructed for better understanding.

## TABLE OF CONTENTS

<b>Notation</b>	.....	i
<b>Abstract</b>	.....	iii
<b>Chapter 1 - The Problem and Its Setting</b>	.....	1
1.1. Introduction	.....	1
1.2. Statement of the Problem	.....	4
1.3. Significance of the Study	.....	5
1.4. Scope and Limitation	.....	7
1.5. Methodology	.....	8
1.6. Review of Related Literature	.....	9
<b>Chapter 2 - Preliminary Concepts</b>	.....	11
<b>Chapter 3 - An Inequality for Designs</b>	.....	50
<b>Chapter 4 - Regular Designs</b>	.....	71
<b>Chapter 5 - Summary, Conclusion and Recommendation</b>	.....	92
<b>Bibliography</b>	.....	95
<b>Index</b>	.....	96
