

Mapping And Inverse Mapping Relation  
In Image Compression Using Neural Network

211000

A Thesis  
Presented to  
The Faculty of the College of Engineering  
Graduate Division  
De La Salle University

In Partial Fulfillment  
of the Requirements for the Degree  
Master of Science in  
Electronics and Communications Engineering

by

Edwin Sybingco

Dr. Felicito Caluyo  
Adviser

December 1993

Abstract

Chapter 1 Introduction	1-1
1.1 Background of the Study	1-1
1.2 Statement of the Problem	1-1
1.3 Objectives	1-2
1.4 Significance of the Study	1-2
1.5 Scope and Delimitation	1-3
1.6 Methodology	1-3
Chapter 2 Literature Review	2-1
2.1 Fundamentals	2-1
2.2 Basic Redundancies	2-3
2.2.1 Coding Redundancy	2-3
2.2.2 Interpixel Redundancy	2-4
2.2.3 Psychovisual Redundancy	2-5
2.3 Fidelity Criteria	2-6
2.4 Image Compression Model	2-8
2.5 Image Encoder and Decoder	2-10
2.6 Neural Networks	2-12
Chapter 3 Theoretical Consideration	3-1
3.1 Neural Network Architecture	3-4
3.2 Back Propagation Algorithm	3-6
3.3 Learning Algorithm	3-8
3.4 Hidden Layer Units Reduction	3-11
Chapter 4 Design Consideration	4-1
4.1 Video Blaster	4-2
4.2 TIFF File Reader	4-3
4.3 Neural Network Architecture	4-6
4.4 Learning Algorithm	4-7
4.5 Image Compression or Encoding	4-7
4.6 Image Decoding	4-9
4.7 Pruning Technique	4-9
4.8 Fidelity Criteria	4-10

<b>Chapter 5 Results and Discussions</b>	<b>5-1</b>
5.1 Training Algorithm	5-1
5.2 64 by 32 by 64 Neural Network	5-3
5.3 64 by 16 by 64 Neural Network	5-4
5.4 64 by 8 by 64 Neural Network	5-5
5.5 128 by 32 by 128 Neural Network	5-10
5.6 128 by 16 by 128 Neural Network	5-12
5.7 Pruning Technique	5-14
5.8 Fidelity Criteria	5-14
<b>Chapter 6 Conclusion and Future Directives</b>	<b>6-1</b>
6.1 Conclusions	6-1
6.2 Future Directives	6-2
<b>Appendix A Connection Weights</b>	<b>A-1</b>
<b>Appendix B Program Listing</b>	<b>B-1</b>
<b>References</b>

# Abstract

---

Image Compression involves converting an image into a new representation that uses a smaller number of bits. The resulting representation can be used to reconstruct the original image without sacrificing the quality of the image. There are several techniques in image compression but those techniques depend on the application. This research will present a new technique in image compression for gray levels using a neural network. The 64 by L by 64 and 128 by L by 128 neural network architectures will be used to figure out the most appropriate mapping and inverse mapping relation for a particular application. Simulation is done in a personal computer to achieve at most an 8 to 1 compression ratio.

The watermark is a circular seal for La Salle University - Dasmariñas. It features a central shield with a book and a star, surrounded by a laurel wreath. The text around the seal reads "LA SALLE UNIVERSITY - DASMARIÑAS" at the top, "DASMARIÑAS, CAVITE, PHILIPPINES" at the bottom, and "Since 1977" at the very bottom.
