Abstract

1.0 Introduction	
1.1 Background of the Study	1
1.2 Statement of the Research Problem	1
1.3 Statement of Objectives	3
1.3.1 General Objective	3
1.3.2 Specific Objective	3
1.4 Significance of the Study	4
1.5 Scope and Limitations	5
1.6 Statement of Assumptions	5
2.0 Review of Related Literature	6
3.0 Methodology	12
4.0 Theoretical Framework	15
5.0 Requirement Analysis	19
5.1 System Overview	19
5.2 System Objective	21
5.2.1 General Objective	21
5.2.2 Specific Objective	21
5.3 Scope and Limitations	21
5.4 Assumptions	22
5.5 Requirement and Needs	22
5.6 Problems that brought about the development of the project	22
6.0 Design Issues	23
6.1 Design Overview	23
6.2 Design Levels	24
6.3 Design Scheme	24
7.0 Implementation Issues	26
7.1 Resource Requirements	26
7.2 Testing and Acceptance	27
7.3 User Training Plan	27
7.4 Conversion Plans	28
7.5 System Maintenance	28
8.0 Results and Discussions	29
9.0 Conclusions and Recommendations	32

### ABSTRACT

The purpose of this project is to investigate the current state-of-the-art in computer-aided instruction (CAI) and develop an interactive CAI tool/package. Although computer-aided instruction has many current uses in businesses, homes and schools, the market is currently lacking in good CAI packages that are designed specifically for high school students. This also serves as a guide to their research and to be more interested in the subject. The program will be designed so that it is very user-friendly, highly interactive, and open-ended. The proponents come up with this idea not to replace classroom teaching but to increase the students' understanding of a specific topic. The proponents used Visual Basic 5.0 to be able to input more graphics, more features uniquely with our own styles, our own rules. FROGCAI is a CAI presentation on the life cycle of a frog. It provides users with textual and graphical presentation of the frog. CAI on Frogs contains information on frogs and at the same time a tutorial to test the students understanding.
