

**ABSTRACT**

The Multimedia Presentation for Philippine History is an interactive multimedia application, developed for the students in public and private schools. Its primary purpose is to present the system through the use of modern technology that will provide another educational reference in presenting the history of the Philippines from Pre-Colonial, Spanish, American and Japanese Era to Young Republic including the events and the life of the Filipino People who live in that specific era. It aims to provide researchers an option for multimedia references and to make an effective use of media tools and to continue familiarizing of the users in the wonder of today's technology. Pictures, video, sound, textual information based on a web browser, and animation has been appropriately incorporated with the system. In order to present information substantially and correctly that can be seen in different modules and sub-modules of the system. Through this way, students can learn the history of the Philippines and at the same time it can entertain them provided with the multimedia tools. In developing the system, a prototyping model was followed. This model is an information gathering technique useful in supplementing the traditional system and in testing certain features of the design. Further improvements on the software may be considered such as buttons for printing, copying and saving a file.
