This study entitled, **An Assessment of Safety and Security at Dasmariñas National High School as Perceived by Selected Group of Respondents**, was made in order to understand current issues and news about safety and security management. As of today, there is rampant news about kidnapping, abduction, and other issues related to security management. It is known that schools, hotels, and other establishments employ security management to ensure the safety and security of their people and property. However, some of those security management techniques do not meet the standard and required qualifications of an efficient security.

For the researchers, it is never too late to come up and meet the required or standard qualifications for an establishment utilizing security management. Problems, deficiencies, and weaknesses were revealed in this study, and out of those matters, the researchers proposed recommendations and suggestions that will positively help in the resurgence of a cost-effective, well trusted, and efficient security management.
