

## EXECUTIVE SUMMARY

Shopping malls are essential to most people. These are where they buy most of their necessities, like our clothes, shoes, jewelries, medicines, bath and beauty accessories, etc. But before they satisfy themselves with their needs and wants, they still have to go through strenuous activities such as -- driving or commuting to the mall, roaming around the mall to look for the main purpose of going there, falling in line in paying, etc. Now, the author thought of creating a system called Internet Bath and Beauty Catalog where consumer can do his shopping at home.

In order to come up with an efficient system, the proponent used prototyping approach.

The intention of this system is to provide convenience to shoppers, to save time and money, to promote safe shopping, to lessen stress, and to make this system available in the Internet. This will be so if the system will be fully implemented. The system will be a great advantage in the business world as on-line shopping is still not available here in the Philippines.

As the study is only of a prototype, the proponent suggests adding more categories and products to offer more varieties to the customers and make the system work as what it is intended to.
