

ABSTRACT

This paper deals with the general and specific information of the City of Las Piñas, from history to establishments, from City Projects to City Leaders, and even the latest news within the community. Creating a web-based information system for Las Piñas City in its simplest and understandable form would benefit the municipality as well as the people who barely know the city. Quality images, data, and significant amount of information are included in the system for better comprehension of the browsers. Having the systems' interesting characteristics becomes a useful tool in informing the browsers. The data in the system were accurate at the time they were written. They are however, subject to change due to continuous alteration of events in the city.
