

ABSTRACT

The What You See You Will Get (WYSIWG-IS) is an automated inventory system for the Supply and Equipment Office of What You See, You Will Get (WYSIWG) Publishing Studio, Inc. It aimed to provide the SEO personnel an effective inventory system that would monitor the items in their inventory system. The purpose of developing the system was to address the current problems encountered by the existing inventory of the Company which is done manually. Such problems included incorrect record keeping, inconsistencies in the data, tedious process of filing and retrieving records, and delayed reports to the Management. The software has features that include modules for the acquisition and requisition of items, file maintenance, utilities, and reports. The methodology used in developing the system was the systematic approach. This approach is a modified systems development life cycle. Prospective users were asked to test the system and give feedback. This was done to let users verify if all requirements for the software were met and to correct any errors in the system that might have been overlooked during the actual running. The testing continue until the users were satisfied with the software.
