

ABSTRACT

QAR Audio is one of the most successful car accessory shops in Imms, Binakayan and Las Pifias. With only three outlets, these establishments have designed cars that have won in numerous car shows. Having these awards has separated them from other car accessory shops. These also gave them recognition for major companies like Zapco, MB Quarts, Ryan Audio and Pioneer to make a deal with them and sell their products. In spite of their success, they are still having problems with some of their tasks. One of these tasks is handling their huge inventory. In managing their inventory, the secretary only lists transactions like deliveries and sales in a logbook. This process may result into loss of items/stocks due to poor handling of the inventory because there is no system that is being followed to have an organized inventory.

After a time of studying these difficulties, the proponents have come up with the automated inventory system for the QAR Audio Firm. The system includes fast update of the stocks and a systematic way of organizing the items. It also has a back-up capability for emergency purposes. The system will definitely lessen the effort used by the persons doing these manual jobs.
