Date completed: April 2016

This study entitled, **The Anti-Hazing Law**, was made in order to know if the Republic Act No. 8049 was fully implemented in De La Salle University-Dasmariñas. As of today, there are many hazing cases that most of the victims were college students. The main reason behind this is the nonstop practice of the brutal initiation rites and the law that avoids hazing is ineffective. There are still some reports that involved the existence of hazing even in an authorized organization of some prestigious universities.

It is well-known that the universities have the duties and responsibilities to avoid cases which are related to hazing. Problems, deficiencies, and weaknesses were made known in this study. The researchers proposed recommendations and suggestions that will positively help the organization inside the universities.
