

ABSTRACT

This study entitled "St. Jude Parish School - Student Record Management System" (SJPS-SRMS) is all about the management of student records.

Through a fast growing population of the school, student records are difficult to handle and maintain. The existing system of SJPS-SRMS involves manual procedures that are difficult to maintain.

Currently, SJPS do their job manually which consumed more of their time and effort. The computation of grades is also done manually through the help of calculators as well as filing of forms. Student records are filed on the cabinets which result redundancy. This is why the proponents conducted a study that focused on student record management system.

The system will cover the automation of the school processes which includes enrolment, grade report generation, and the management of other student records such as delinquencies and accountabilities. Computer-based system will help them minimize their jobs and keeping of records will be more efficient.
