

Abstract

Many multi-national companies today aim for excellence in delivering the needs of various consumers in the different fields of businesses. For them, the satisfaction and contentment of their customers are their number one priority.

The system covers production orders and costing. It is about the different processes that the company has to go through in order to accomplish an order by their client. Trade Galore International Incorporated is an import/export company, which produces different kinds of furniture. If a prospective client wishes to buy a furniture, the Marketing department, handled by the Marketing manager will have to go thru tedious task in computing for many different categories in production costing. The system will make the production cost organized, user-friendly and comprehensive computerized automation of production costing. The things that they have to compute manually are numerous. With the help of this system, it will be done automatically with just a few important inputs from the user. The system will provide a well-mannered processing of documents, reports and calculations.

The group has chosen to follow the PROTOTYPING METHODOLOGY, which is an iterative process of systems development in which requirements are converted to a working system that is continually revised through close work between and analyst and users. The study is very much needed by the company because they are having difficult time in data processing. The system would save them time, effort and money and thus they will have a more easier work. The company can now avoid time consuming paperworks .

The company needs the system because they have to maintain its competitiveness and reliability. It will make their work ahead of time.
