Abstract

As part of the fulfillment of the requirement in the Degree of Bachelor of Science in Computer Science a Special Problem was given to be studied and it was named Philippine Christian University (PCU) – Automated Enrollment System. As the name itself, suggests this study involved the existing enrollment of the PCU located at Palapala Dasmariñas, Cavite. As the proponents went along this study, the proponents determined the problem of the existing enrollment system by conducting an interview to those people who are involved in the enrollment and by studying the PCU enrollment procedures. The solution is to come up with a proposed system that will lessen the enrollment procedures by developing a software using Visual Basic 6.0 that will provide security for the user, easy access of records of the students and generating report. This solution will not only provide contentment on the part of the administration/user but also to those parents of the students and the students themselves and the school as a whole will benefit in the system.
