Abstract

A billing system is developed for Christ the King Hospital to address the problems of existing system such as tedious file management, production of monthly report, redundancy of work, and inconsistency in the computation of bills of a particular patient.

The proponents conduct interview to gather data that are needed in developing the software. Based on the interview, the proponents analyze the problem of the existing system and come up with the study that complies with the system requirement. Prototyping and system development life cycle are used in developing the software.

The general objective of the study is to developed an effective and reliable billing system, which includes the easy access of patients record, accurate calculation of bills, and efficient generation of monthly reports that are essentials to the institution.

1.0	Introduction	
1.1	The Problem and its Background	1-1
1.2	Statement of Objectives	1-3
1.3	Significance of the Study	1-3
1.4	Scope and Limitations	1-4
1.5	System's Methodology	1-4
2.0	Review of Related Literatures	2-7
3.0	The Existing System	
3.1	Current System Overview	3-10
3.2	Administrative Setup	3-11
3.3	System Coverage	3-12
3.4	System Inputs	3-13
3.5	System Outputs	3-13
3.6	Problem and Difficulties in the System	3-13
4.0	The Proposed System	
4.1	Description	4-15
4.2	Scope of the Proposed System	4-16
4.3	System's Objective	4-17
4.4	System Justification	4-17
4.5	System Design	4-18
4.6	Architectural Design	4-20
4.7	Database Design	4-27
4.8	Project Schedule	4-31
5.0	Summary, Conclusion, and Recommendation	5-32
