

### ABSTRACT

Maybelle Mart Inventory System (MMIS) has been developed to address to the current problems of the Mart. This would serve as a sample to other mart in Amadeo, Cavite if ever this will be implemented.

This special problem started with the analysis of the existing inventory through gathering information. The application of prototyping method for system and software development followed. The entire objective was set to be found in the proposed system to serve as a guide for designing. After the design, testing followed and then the implementation.

The system aims to perform accurate and reliable computation to lessen the time consumed in computation of inventory. This system generates inventory and sales transaction.
