

Abstract

The current technology networking is very popular due to its different usages and help among people around the world. This prompted the proponents to conduct a study on BPI networking area. The proponents encountered difficulties in making contact with one department to another department causing delay of information on the customer needs or department-to-department information.

The proponents thought of networking as the best solution. Included in the network are the chat room for communication and DR View for the Delivery Receipt information to view when the need arises.
