CHAPTER 9

Conclusion and Recommendation

9.1 Conclusion

The implementation of the proposed payroll system proves that every transaction can be easier to finish and in just a short span of time. Computerization of the manual process is more likely to be advantageous. The said system saves a lot time in handling all the data's that are needed to be processed. It gives time for employees to do more jobs that are related to the company's operations. It is not prone to errors than that of a manual work. It is also easier to compute the salary of each employee.

9.2 Recommendations

The proponents would like to recommend for other proponents who wants to pursue this study to include other deductions that haven't been included in the proposed system such as Pag-ibig loans and tax withheld. . Those students and future researchers who would like to develop the system should include in their studies the scope for regular employees. They can make changes on the language used to continue the system development. They can also use any methodology that will suit the needs of their study.
