De La Salle University – Dasmariñas

ABSTRACT

Enrollment system in Child Development and Guidance Center (CDGC) was proposed by the proponents to solve the problems encountered by the institution during enrollment.

This system was developed to give accuracy and reliability in the transaction and data storage especially for the enrollment committee and students of Child Development and Guidance Center. The proponents studied the problems the school encountered during enrollment by research, interviews from the employee and the students, and observation to develop the system.

The solution that the proponents came out with was to provide an automatic computation of fees for every student and to create a database for student's information for easy update, retrieval and handling.

The developed system will help CDGC for an easy and faster transaction during enrollment.
