

ABSTRACT

Royal Crown Lending Investors Corporation started as a small business as it progresses, the need for efficiency, accuracy and safety of its records should taken into consideration. These problems are the main concern of the proponents. Because of these, the proponents chose to automate the present manual system of Royal Crown Lending Investors Corporation.

The proponents used many references to create an automated transaction system. The researchers have given Royal Crown Lending Investors Corporation personnel and managers the necessary information for them to have an overview of what kind of system the researchers would create, how the system can aid it, in its daily transactions and the people who would benefit in succeeding sections from the said automated system.

The scope and limitations of the automated system are elaborated. Even materials needed in the system development such as software and hardware specification are also identified. Cost of the system development and the return of investment or the time for Royal Crown Lending Investors Corporation to profit from the said automated system were given consideration. Recommendations and conclusion for the next researchers are also elaborated to aid them. Training for the system end-users are also stated.
