

## ABSTRACT

St. Rose Learning School, Inc. started its operation in June of 1991. It is located in Rose St., Real Subdivision, Palico, Imus, Cavite. The school is owned and managed by Mr. and Mrs. Saria. The school was named after St. Rose of Lima, Peru. They named it after her because she was a charitable human being and offered her life to help the needy. The school's principal is Mrs. Lydia Saria and the guidance counselor is Mrs. Virginia V. Onesa who were former teachers of the Imus Pilot Elementary School, a public school where they served for a very long time and continue to serve St. Rose Learning School.

This study was primarily designed to help St. Rose Learning School, Inc. to help lighten the burden of the registrar who alone handles most of the work in the enrollment process. The study aims to make the enrollment process easier and less time-consuming. With the system's database, records of the students can easily be accessed and manipulated. This system will help the school's enrollment process be made faster and will also help the school's registration officer keep track of records and other important data.

It is assumed that the system would be user-friendly. Since the person who is going to use it is not that of a computer literate, graphical user interface is made easy to understand. With the system's simplicity with regards to the forms, the registrar of St. Rose Learning School, Inc. can easily maintain student data.
