De La Salle University – Dasmariñas

Abstract

The proponent has developed the theses, which searches and manages the system of De La Salle University-Dasmariñas. This computerized information system is entitled "Computerized Theses Searching and Managing System". The system covers the thesis section of Aklatang Emilio Aguinaldo (School's Library) where the process of searching and managing theses of the existing system is studied.

With the said proposed system, a thesis has been categorized into different courses with the different topics as the options to be searched. Keywords will be used for faster access to the needed theses. Categories for each course will also be provided so users can make advance searching. In this way, Theses Administrators and Researchers consume lesser time in searching and managing theses.

The software has been designed not only to provide a higher technology but also to make easier and faster way of searching and managing in just one click. Therefore, system users will definitely benefit from the advantages of the system design.
