ABSTRACT

Presence of coliform in the groundwater of Bacoor, Cavite and its association with iron and manganese bacteria were investigated in this study. Physico-chemical parameters of water such as pH, temperature, biological oxygen demand (BOD), and dissolved oxygen (DO) were also measured in order to determine its effect on the presence of bacteria in the groundwater. In the study, coliform, and iron and manganese bacteria were isolated and grown from their respective media and was then confirmed by API kit. Mixed culture experiment, and Miles and Misra method for the viable counting were used. Multiple correlation of linear regression with 5% significance level was the statistical tool used in the research. Results revealed that physico-chemical parameters measured only have small differences in their values yet higher values were observed to samples with the presence of the three bacteria. Coliforms were present in ten samples of groundwater while iron and manganese bacteria were positive to only two samples. No correlation was observed between coliforms and iron bacteria ($p>0.05$) while there is significant correlation between coliforms and manganese bacteria ($p=0.0021$).

TABLE OF CONTENTS

Title Page	1
Approval Sheet	2
Acknowledgments	3
Abstract	5
Table of Contents	6
CHAPTER 1 INTRODUCTION	
1.1 Background of the Study	10
1.2 Conceptual Framework	11
1.3 Statement of the Problem	12
1.4 Hypotheses	13
1.5 Scope and Limitations	13
1.6 Significance of the Study	14
1.7 Definition of Terms	14
CHAPTER 2 LITERATURE REVIEW	
2.1 Conceptual Literature	16
2.2 Related Literature	29
CHAPTER 3 METHODOLOGY	
3.1 Research Design	32
3.2 Research Setting	32
3.3 Research Procedure	32

3.4 Data Gathering and Statistical Analysis	34
CHAPTER 4 RESULTS AND DISCUSSION	
4.1 Results	36
4.2 Discussion	39
CHAPTER 5 CONCLUSIONS AND RECOMMENDATIONS	
5.1 Conclusions	44
5.2 Recommendations	45
Cited References	47
Appendices	
A. Map of Sampling Site	53
B. Standard Procedures	53
C. Raw Data	56
D. Statistical Data	58
E. Budgetary Requirements	59
F. Time Table of Activities	60
G. Photodocumentation	62
Curriculum Vitae	69

LIST OF TABLES

1. Presence of coliforms and, iron and manganese bacteria in groundwater of Bacoor, Cavite	36
2. Physico-chemical parameters of deep-well water samples	37
3. Colony-forming units of iron bacteria, manganese bacteria, and coliforms	56
4. Colony-forming units for mixed-culture experiment	57
5. Analytical Profile Index (API) 20 E results for the isolates	57
6. Multiple Correlation between coliforms, iron and manganese bacteria	58
7. Linear regression between coliforms, iron and manganese bacteria	58

LIST OF FIGURES

1. Correlation between coliforms, iron and manganese bacteria in CFU/ml	39
2. Sites of water samples, Baranggay Panapaan IV, Bacoor, Cavite	62
3. Testing of physico-chemical parameters of water	63
4. Filtration set-up to isolate the microorganisms	63
5. Filtrate on the manifold paper (left) place in nutrient broth for 24 hrs	64
6. Media preparation	64
7. Isolates iron bacteria (left) and manganese bacteria (right) in basal medium	65
8. Iron and manganese bacteria in basal medium slant	65
9. Colony-forming units of iron bacteria using the Miles and Misra method	66
10. Colony-forming units of manganese bacteria using the Miles and Misra method	66
11. Colony-forming units of coliforms using the Miles and Misra method	67
12. Mixed culture experiment: coliform + manganese bacteria (right); coliform + iron bacteria (left)	67
13. Coliforms with green metallic sheen in EMBA	68
14. Confirmatory test of bacteria using Analytical Profile Index (API) 20 E	68
