## ABSTRACT

Philippine-German Development Foundation, Inc. (PhilGerFund) is a non-government, non-profit, non-stock, non-partisan development organization founded in September 1988. It mobilizes and facilitates technical and financial assistance to small and emerging organizations.

After some years of service, PhilGerFund has supported numbers of projects, which resulted to a more complex set of data and information. More over, a lot of the supported projects have failed and stopped functioning due to lack of immediate information and speedy decision-making.

The proponents proposed an MIS for PhilGerFund that will hold the organization's data to provide information, generate reports, and give reminders of unfinished tasks.

The proposed system will generate reports both in table and graphical form. A Microsoft agent will also be included to enhance the features of the system. The agent is designed to remind the user of the organization's unfinished tasks.

The group has come up with four prototypes, of which, the third and fourth prototype were presented to the intended users. The fourth prototype was able to meet the objectives mentioned above and has the possibility of being implemented in the organization.
