

ABSTRACT

The Management Information System for RCVJ Incorporated intends to solve major problems faced by the management concerned in monitoring of all transactions within the Personnel Department. It offers several features that would help them do their daily transaction, though in different manner, but in easier way like updating and maintaining each employees and clients records.

It would be a great help for the management because of the automation of some tedious work, which is done, manually in their current system such as record checking, verifying and searching. It also has the capability of generating reports for more accurate and faster computations.
