ABSTRACT

The Motor Insurance System was developed for Mapfre Motor Insurance Corporation. The Mapfre Motor Insurance System is a software for the agents of Mapfre Insurance Corporation. The system would update, retrieve data, speed up the process of business transaction and create a policy number. It was implemented using Microsoft Visual Basic version 6.0.

The proponents conducted an interview to users about the present system. They also interviewed the managers to gather information, suggestions and to know the problems to improve their existing or back-up module in the system to eliminate data loss.

The system provides username and password that determines the level of usage the system can offer to its users for its security. Moreover, the system minimizes error, workload and boosts the morale of the personnel. Testing of the system was conducted to ensure its high quality and to meet the standard of the company. The study is for Motor Insurances only. The accounting system is not part of the system, neither the claiming of damages.
