

ABSTRACT

The Online Reservation with Billing System was proposed in replacement of the Manual Billing and Reservation System for Rio Villa Nuevo Resort, for the company to have a systematized operation and transaction, in addition to a trouble-free work for the officers-in-charge. The system was built on the World Wide Web Technologies, and was operated entirely online, providing clients with a friendly, simple-to-use, yet powerful tool for managing and optimizing throughput.

Likewise, the proponents developed a proficient and useful system for Rio Villa Nuevo resort. There was a reservation of rooms, amenities and billing for every transaction. The system was also provided an everyday inventory, and billing and invoices for the client or as requested by the client.

In spite of the resort's success, they are still encountering problems and difficulty in managing their records and billing reports are still manually done. The proposed system would be very helpful for the company on managing their information and transaction such as monitoring the availability of the rooms, availability of the date and time, number of guests, reservation of facilities by the customers, issuing of official receipt and generating survey reports will be faster and easier. They will also have a website that will surely add in the promotion of their resort, they will attract and gain more customers.
