

ABSTRACT

NAME OF INSTITUTION: De la Salle University Dasmariñas

ADDRESS: Dasmariñas, Cavite

TITLE: Cause of inefficiency in the After Diecasting Screening Section process

AUTHORS(S)/PROPONENT(S):

FUNDING SOURCE: Parents

COST: P1,400.00

DATE STARTED: December 2000

DATE COMPLETED:

MARCH 2001

OBJECTIVES OF THE STUDY

- A. **GENERAL:** - To make the whole section of process work continuously.
- B. **SPECIFIC:** - To eliminate inefficient work in After Diecasting Screening Section.

-To meet the target output in time.

SCOPE AND COVERAGE: This study was conducted at the company of Tsukuba Philippine Diecasting Corporation. The researcher was assigned to do his work and duty in the After Diecasting Screening Section, where the study is conducted and focused in that section because of the Inefficiency of work, due to improper check-ups and inspection of the workers in the product.

METHODOLOGY: The researcher conducted his study by doing actual observations in the process, interview, researches, and ask some assistance to his classmates.

CONCLUSIONS: The researcher concluded according to the study conducted at Tsukuba Philippine Diecasting Corporation that the alternative for the said problem for the company was feasible to implement because this will maximize income and productivity for the company.

RECOMMENDATIONS: The researcher recommend the alternative no. 1 for the company because it has more advantages which are, it will eliminate inefficient work, maximize income and productivity, and more efficient inspection of the product. This will make the company to be productive and progressive.
