

ABSTRACT

Facts presented in this study were obtained from the administration of De La Salle University – Dasmariñas, students and various local automobile manufacturers around Cavite area. Figures and data were treated creatively, methodologically, and scientifically organized for better understanding of the reader. The Balik – balik transport system will provide transportation for the residents of De La Salle University – Dasmariñas. The residents include students, faculty members, administrative staff and employees of small business within the university. The initial capital required by the business is four hundred eighty thousand pesos (P480,000.00), which covers expenses from the acquisition of the vehicles, manpower, etc (see 4.9 computation). The type of vehicle recommended is a 3k-engine multi cab Suzuki, 12-seater van, which runs on unleaded gasoline fuel.
