UTOPIA:
A Proposed Automated Residential Community

A Thesis Presented to the Faculty of College of Engineering, Architecture and Technology De La Salle University- Dasmariñas

In Partial Fulfillment of the Requirements for the Degree of Bachelor of Science in Architecture

Venturanza, Jhela Jordine I.

April 2015
Abstract

Since the beginning of time, people have always been fascinated of anticipating what the future will look like. In current times, there have been so many technological advancements accomplished that can improve ways of living, including homes. This paper seeks to let readers re envision how technology and architectural design can be combined and incorporated into homes to make lives easier. Through design and the latest gizmos, living spaces can be more efficient and habitable.

Among the used methods of research are the review of related projects and literature, site selection analysis, review of building laws, interviews, surveys, etc. These were necessary in order to make a plan that would be more advanced than current homes. After the research, the information gathered is then applied to improve the design of the community.

This paper can be used to be able to take a look on how lifestyles can be improved through combining the classic concepts of green building design and the use of automation.

Abstract........................................................................................................................... II
Table of Contents............................................................................................................ III
List of Tables................................................................................................................... IX
List of Figures................................................................................................................ X

CHAPTER 1:  The Problem and Its Setting................................................................. 1

1.1 Introduction ............................................................................................................. 1
   1.1.1 Rationale of the Project..................................................................................1
   1.1.2 Background of the Project.............................................................................. 3

1.2 Project Goals and Objectives .................................................................................. 7

1.3 Significance and Expected Output ...........................................................................9

1.4 Scope and Delimitation ...........................................................................................9

CHAPTER 2:  Theoretical Framework .................................................................11

2.1 Review of Related Literature .............................................................................11
   2.1.1 Foreign Projects..........................................................................................11
      2.1.1.1 The Light Point Condominium, Malaysia.........................................11
      2.1.1.2 Vista Millennium Condominiums, Malaysia....................................12
      2.1.1.3 Villa Amanzi, Phuket, Thailand.........................................................13
      2.1.1.4 Honda Smart Home, University of California..................................15

   2.1.2 Local Projects...............................................................................................17
      2.1.2.1 Elegant Condo in Ritzville, Clark Angeles City, Pampanga....17

III
2.1.2.2 Twin Oaks Place Condo

2.1.2.3 Brand New Modern 3-Storey House in Loyola Grand Villas, Quezon City

2.1.3 Home Domotics

2.1.3.1 Home Automation and Assistive Technology

2.1.3.2 Voice Control Home Automation for the Physically Impaired Utilizing Servant

2.1.4 Literature

2.1.4.1 A Reality Check on Home Automation Technologies

2.1.4.2 Home Automation as a Service

2.1.4.3 Design and Implementation of a Wifi Based Home Automation System

2.1.3.4 Saving Money on Lights

2.1.3.5 House in Evans saving on electric bill with automation

2.1.3.6 Smart Home Technologies That Will Save You Money

2.1.5 Related Laws

2.1.5.1 Building Laws

2.1.5.1.1 National Building Code of the Philippines (P.D. 1096)

2.1.5.1.2 Fire Code of the Philippines (R.A. 9514)

2.1.5.1.3 Accessibility Law (B.P.P. 344)

2.1.5.1.4 Subdivision and Condominium Project Buyers' Protective Decree (P.D. 957)

2.1.5.1.5 Local Ordinances of Pasay City

2.2 Conceptual Framework

2.3 Methodology
CHAPTER 3: Site Selection

3.1 Site Selection Criteria

3.2 Site Selection Process

3.3 Site Criteria

3.3.1 Lot Character

3.3.2 Accessibility to Public Facilities

3.3.3 Neighborhood and Comprehensive Plan Compatibility

3.4 Macro Analysis

3.4.1 Regional Setting

3.5 Micro Analysis

3.5.1 City Setting

3.5.1.1 Site I: Quezon City

3.5.1.2 Site II: Pasay City

3.5.1.3 Site III: Makati City
CHAPTER 4    Architectural Design Development and Architectural Engineering ........................................66

4.1 Base Map ..................................................................................................................................66
4.2 Site Computation .......................................................................................................................67
4.3 Space Requirements ..................................................................................................................68
  4.3.1 Administration ......................................................................................................................68
  4.3.2 Site Requirements ...............................................................................................................69
  4.3.3 Amenities .............................................................................................................................69
  4.3.4 Residences ..........................................................................................................................70
4.4 Space Allocation ........................................................................................................................71
4.5 Programming Diagrams .............................................................................................................84
4.6 Project Technical Requirements ...............................................................................................90
  4.6.1 Home Automation Products to be Used in the Project ..........................................................90
    4.6.1.1 SwitchLinc Dimmer .........................................................................................................90
    4.6.1.2 INSTEON LED Bulb - Edison Screw Base .................................................................91
    4.6.1.3 INSTEON 2441TH Thermostat .................................................................................94
    4.6.1.4 INSTEON 2842-222 Wireless Motion Sensor ............................................................96
    4.6.1.5 MiLocks QF-01SN 3-in-1 Keyless Entry Deadbolt with ... RF Remote Control ...........98
