VI. Summary

Briquetting is the process of collecting combustible materials that are not usable and compressing them into solid fuel of a convenient shape that can be burned like wood or charcoal. The proponents utilized data gathered from both government and private institutions.

The form of business organization is sole proprietorship. Under the supervision of the manager are the secretary and three departments such as administrative, production and selling.. Channels of distribution are wholesalers and retailers.

Manufacturing process includes inputting of raw materials, charcoaling, crushing, mixing, briquetting, drying, packaging and storing.

The total project cost of the proposed business is estimated at P 1,605,618 which came from the owner's equity. Projected net income from the year 1994-1998 are P1,096,474 1,381,906,1,841,849, 2,399,912 and 2,875,350. The proposed business will benefit the people by reducing the unemployment problem in our country.
