CHAPTER 6

Conclusion and Recommendation

Conclusion

Base on this study, the following conclusion were drawn that they have only three machines for making the J-furring ceiling assembly product and all the machines are working regularly. The production of standard product stops when the special fabrication order of their customer appears. The priority of the firm is to serve their loyal customers, so that they perform first the special fabrications and stops the production of the standard and least priority of the firm.

Recommendation

Based on the study the following recommendations are to buy J-furring roll forming machine and to hire another production operator.
