Chapter 5

Conclusion and Recommendation

5.1. Conclusion

5.1.1. The proposed system makes the job of the reservation officer easier, for it covers one of the major problem “time consuming”. Compared to the current system, the time spent filling up forms and storing of documents makes their job as reservation officer not concurrent .

5.1.2. An online billing and reservation system is strict in terms of the usage of date and time, and the proponents find it challenging to accurately make use of the date and time feature.

5.1.3. Most of the data (e.g. rates, check in and check out time, policies, etc.) are reliable upon making an online billing and reservation system of Kalipayan Resort.

5.2. Recommendation

5.2.1. To maximize the data gathering process, important information like customer receipt must be provided. But as proponents, the data are treated as confidential. For further analysis and be used as proof of defense, the data could be made available.

5.2.2. Provided information by the company must be translated in technical terms as simple as possible. For future researchers and other company studies take this as a reliable source and is easy to understand.

5.2.3. All functions of the system must be directed or be explained in the forms of the system and, if ever needed, it should be brief as possible. For end users are not that knowledgeable to use some computerized device, especially the past the coming generation.
