ABSTRACT

License Plate Recognition System is an automatic plate vehicle identification system which is primarily designed for parking lot access control. The system utilizes image processing which is an advance information processing technology. Plate extraction, character segmentation and character recognition are the three main processes applied to develop the system. Artificial neural network serves as the technique in order to allow the system to train and learn on its own given the training data acquired. LPR System is designed to recognize plate characters in the shortest possible time, as efficient as possible in order to be stored in designated database for parking automation. The system reads a plate number upon entry of a vehicle and then provides an identification ticket that will be presented when the vehicle exits. Parking ticket serves as the main output which includes all information on the activity made inside the parking area (time in and time out) and the computation of fees. The system also displays the available parking slots.

Misdetection rate is 8.22 % while false detection is 24.01 %. Over-all accuracy of the system in performing all processes is 73.72 %.

TABLE OF CONTENTS

Contents	Page numbers
Title Page	i
Approval Sheet	ii
Certificate	iii
Abstract	iv
Acknowledgement	v
Table of Contents	viii
List of Figures	x
List of Tables	xi
I. Introduction	
1.1 Project Context	1
1.2 Purpose and Description	2
1.3 Objective	5
1.3.1 General Objective	5
1.3.2 Specific Objective	5
1.4 Scope and Limitations	5
II. Review of Related Literature	
Foreign Literature	
2.1 Artificial Intelligence –Back Propagation Neural Network	9
2.2 Data Mining	10
2.3 Intelligent Characters Recognition	11
2.4 Object Detection	12
2.5 Fuzzy Image Processing	13
2.6 Histogram Based- Back Propagation Neural Network	1
Local Literature	
2.7 Multi-Feature Approach to Smoke Detection in Video	16
2.8 Slant Correction of License Plate Images	17
2.9 Real-Time License Plate Localization for Difficult Cases	17
2.10 Tree Leaf Identification through Digital Image Processing	18
2.11 Image Manipulation using Edge Detection	19
2.12 Image Patter Recognition using Template Matching	20
III. Theoretical Framework	
3.1 Research Paradigm	22
3.2 Concept of the Study	24
3.2.1 Methodology	24
3.2.2 Input Process Output	27

3.3 Conceptual Process	29
3.4 Conceptual Operation	30
3.4.1 Installation Plan	31
3.4.2 Installation Requirements	34
3.4.2.1 Software Requirements	34
3.4.2.2 Hardware Requirements	34
3.4.2.3 People Installation Requirements	35
3.4.2.4 Tools	36
IV. Design and Methodology	
4.1 Project Development	37
4.1.1 Screenshots	37
4.1.2 Data Flow Diagram	45
4.1.2.1 Context Level Data Flow Diagram	45
4.1.2.2 Level 0 Data Flow Diagram	46
4.2 Development Planning	48
4.2.1 Software Suited	48
4.2.2 Language Used	52
4.3 Evaluation of the Project	54
4.3.1 Respondents	54
4.3.2 Research Instruments and Techniques	55
4.3.3 Data Gathering Procedure	56
4.3.4 Statistical Treatment of Data	57
V. Results and Discussion	
5.1 Results from Survey Conducted	58
5.2 Results from Processes	67
5.3 Algorithm Discussion	69
VI. Conclusions & Recommendation	
6.1 Conclusion	74
6.2 Recommendation	75
Bibliography	78
Appendix A – User’s Manual	79
Appendix B – System Diagram	85
Appendix C – LPRs Evaluation Form	88
Appendix D – Related Document	89
Appendix E – Curriculum Vitae	93

LIST OF TABLES

Table 5.1.1 Percentage and Weighted Mean: Functionality	59
<i>Was the system able to recognize the plate number?</i>	
Table 5.1.2 Percentage and Weighted Mean: Functionality	60
<i>Were all information printed on the parking ticket complete?</i>	
Table 5.1.3 Percentage and Weighted Mean: Usability	61
<i>Was the system able to help in controlling access in the parking lot?</i>	
Table 5.1.4 Percentage and Weighted Mean: Usability	61
<i>Was the display of available parking spaces helpful?</i>	
Table 5.1.5 Percentage and Weighted Mean: Accuracy	62
<i>Was the plate number recognized correctly?</i>	
Table 5.1.6 Percentage and Weighted Mean: Accuracy	63
<i>Are all information printed in the parking ticket correct?</i>	
Table 5.1.7 Percentage and Weighted Mean: Applicability	64
<i>Can the system be applied in most parking areas?</i>	
Table 5.1.8 Percentage and Weighted Mean: Applicability	64
<i>Can the system entertain all types of vehicles?</i>	
Table 5.1.9 Percentage and Weighted Mean: Adaptability	65
<i>Can the system be used not only in school premises but in areas like mall and public parking lots?</i>	
Table 5.1.10 Percentage and Weighted Mean: Efficiency	66
<i>Was the system able to process the image in the shortest time possible providing correct results?</i>	
Table 5.1.11 Percentage and Weighted Mean: Efficiency	67
<i>Was the displayed number of parking spaces update real time?</i>
