Title of the Research: **EVALUATION OF THE RELATED LEARNING EXPERIENCE (RLE) INSTRUCTIONAL STRATEGIES AMONG NURSING SCHOOLS IN CALABARZON: BASIS FOR PROPOSED GUIDELINES FOR SKILLS ENHANCEMENT**

Author: **ANALI G. TANGOG**

Degree: **Doctor of Philosophy**

Major: **Educational Management**

Date Completed: **May 2013**

This study attempted to evaluate the ten RLE instructional strategies applied in ten nursing subjects in Related Learning Experience (RLE). Specifically, it described the profile of the respondent nursing schools in CALABARZON –IVA in terms of human resources, physical facilities, and instructional standards. It also evaluated the RLE instructional strategies as rated by the clinical instructors and the students and determined if there were significant differences in the evaluation of the respondents. Moreover, it described the performance of the respondents in the Philippine Nurse’s Licensure Examination (PNLE) for the past five years. Finally, the study proposed nursing skills enhancement guidelines for RLE instructional strategies based on the results of the evaluation. The CIPP model was utilized as the framework of the study. The research instrument was subjected to reliability with the results ranged from 0.06 to 0.8 at 0.05 level of significance. Thirteen nursing schools in CALABARZON were involved in the study. These schools were the Adventist University of the Philippines, Emilio Aguinaldo College- Dasmariñas, Olivarez College-Tagaytay City, University
of Perpetual Help System-Binan, CDH Allied Medical College (Calamba Doctor’s College), De La Salle Lipa City, Lyceum-St.Cabrini Allied Health Sciences, Siena College, Tomas Claudio College, Sacred Heart College, Southern Luzon State University, Unciano Colleges, and World Citi College. A total of 1063 respondents were used. Frequency counts, relative frequencies in percent, means, standard deviations, coefficient of variations, and t-test were used.

The profile of the respondent schools showed that 13 deans were graduates of either MAN/MSN, had at least 1-5 years of administrative experience and had been teaching for 20 years or more. Majority of the clinical instructors were graduates of either MAN/MSN, or MAEd, and had at least 1-9 years of teaching experience. Indicators were partially existing in the nursing skills laboratory and clinical facilities were comprised of; “arrangement of seat is amphitheater style,” “has electrocardiogram,” “has virtual skills laboratory,” “has classroom for conference,” and “has library.” All of the 13 participating schools followed the prescribed clinical instructor-student ratio except in 4th year level, which had the ratio of 10-12. Most of the student–clientele ratio prescribed by the CMO 14, Series of 2009 per level were not followed except in 2nd year, 1st semester and 3rd year levels, 1st semester. Almost half of the participating schools had not been accredited in their more than five years of existence. Nine out of ten RLE instructional strategies were rated very good to excellent by the students and the clinical instructors. Only journal writing was rated very good by the respondents as applied to nursing subjects with RLE.

RLE instructional strategies with significant results include bedside teaching as applied to N-104, N-106 and INP; case study as applied to N-102, N-106, and INP; coaching as applied to N-102, N-104, N-106 and INP; conferences as applied to N-104, N-106 and N-107; demonstration as applied
to FNP; N-102, N-104, N-106, and N-107; feedback as applied to N-102, N-106, N-107 and INP; reflecting as applied to N-104, and N-106; role modeling as applied to N-104, N-106 and INP; and, simulation as applied to N-104, N-106, N-107 and INP; Three out of 13 participating schools did not perform in the PNLE.

Based on the findings and conclusions of the study, it is recommended that participating nursing schools should have definite and clear guidelines of RLE instructional strategies. These instructional guidelines may help the nursing students in honing their nursing skills, likewise increase and improve performance rating in the PNLE by the participating schools. Nursing educators should make use of these RLE instructional guidelines and full implementation for each RLE instructional strategy in nursing subjects with RLE. Nursing students should be more vigilant and assertive in expressing their needs to practice what are prescribed in the guidelines of each RLE strategy. Nursing administrators, should design the seats like amphitheater styles in nursing skills laboratory and provide ECG equipment, conference room, and library and provide a virtual skills laboratory. The Commission on Higher Education (CHED) should regularly monitor the participating schools in terms of the implementation of policies and standards of the BSN program. Future researchers on nursing education, this endeavor may provide additional contribution to the body of knowledge in the area of evaluation of RLE instructional strategies in RLE.
ACKNOWLEDGMENTS

With sincere expression of thanks and gratitude, the researcher would like to acknowledge the following persons for their unwavering support to make this endeavor possible and more meaningful. The support and inspiration of the following persons paved the way towards the realization of this study:

To the deans of the nursing schools in Region IV-A CALABARZON, for extending their precious time and generosity in allowing the researcher to conduct the study; to the clinical instructors and the students who patiently devoted their time of answering the researcher’s instrument; and to the deans’ secretaries of the nursing schools who helped the researcher in the data collection;

To Dr. Manuel Camarse, dean of the College of Education, and to Dr. Fanny A. Cuyos, Director of the College of Education Graduate Studies, for their unbounded encouragement, inspiration and words of enlightenment;

To the Dissertation Review Panel, Dr. Manuel G. Camarse, Dr. Naomi M. De Aro, Dr. Judith D. Aldaba, Dr. Alvin D. Crudo, and Dr. Paulito V. Hilario, for sharing their brilliant ideas and expertise for the betterment of this study;

To her dissertation adviser, Dr. Cristeta M. Montano, who patiently guided, advised, motivated and encouraged her and for giving a very significant impact in the completion of this study;
To the COEGS staff, most especially to Ms. Ma. Luisa Abiador, for always helping the researcher and extending support to finish this endeavor;

To the DLSU-D library staff and DLSHSI library staff, most especially to Ms. Lani Libunan, for helping the researcher in finding book references;

To my CNSM family, most especially to Dr. Naomi M. De Aro, dean of the College of Nursing and School of Midwifery, for always being supportive and considerate and to the CNSM faculty, for their moral support and understanding when the researcher was preoccupied with this endeavor;

To the validators namely, Dr. Rommel Salazar, Dr. Ma. Bernadette R. Daplas, and Dr. Susan Olavidez, for sharing their significant comments, and suggestions;

To the COEGS professors, most especially to Dr. Alvin D. Crudo, Dr. Isaias A. Banaag, Dr. Myrna F. Ramos, Dr. Olivia M. Legaspi, Dr. Madison B. Valera, Dr. Corazon M. Tined, Dr. Rosalinda G. Garibay, and Dr. Cristeta M. Montano, who served as her mentors, for sharing their knowledge, experience, expertise, and wisdom to the researcher’s professional growth;

To her loving parents, Rev. Ramon E. Gloria and Mrs. Rebecca M. Gloria (both deceased), for their unconditional loved, affection and support, the researcher’s source of inspiration and motivation to pursue this study;
To her siblings, most especially to Ms. Aleta Gloria-Malbacias, for providing her resources and assistance as well as showing great concerns;

To her sister-in law, Ms. Perla Gloria researcher’s assistant, for helping the researcher in the data gathering and to her relatives, most especially Sharah Mae Gloria, who served as the researcher’s encoder for sacrificing so much in encoding the data;

To her sister-in law, Dr. Marjorie G. Tangog, for being supportive and for sharing enthusiasm in helping the researcher finish this study;

To her beloved husband and children, Raul M. Tangog, Rualan G. Tangog and Ranali G. Tangog, for being constantly patient, supportive, understanding, and loving while the researcher was preoccupied with her study and for serving as the researcher’s source of strength, joy, and inspiration in helping realize her dream;

And above all, to our Dearest Lord Almighty God, the Master of all to whom the researcher owed her life, thank you for listening and answering the researcher’s petitions, and prayers, despite of those time when she really wanted to quit but then HIS presence is an extraordinary one and constantly gave the researcher’s strength, courage, and endurance to accomplish her study. To God be the Glory.
