## ABSTRACT

Poultry animal such as chickens (*Gallus gallus domesticus*) is one of the leading sources of organic foods in the Philippines. However, parasites such as *Ascaridia galli* cause negative effect on meat and eggs production. Accordingly, anthelmintic drugs such as Albendazole have been a successful aid to fight against parasitic infection until parasites have developed anthelmintic resistance, thus, Sampaloc (*Tamarindus indica*) has been used in this study to assess its effect on the egg development of *A. galli*. Different concentrations of *T. indica* crude leaf extract were prepared at 20% (T1), 40% (T2), 60% (T3) and 80% (T4) as well as control groups, Albendazole (T+) and Phosphate Buffer Solution (T0). *A. galli* eggs were incubated per treatment and replicated three times. After 21 days of incubation under room temperature, results revealed that the *T. indica* crude leaf extract with 20% concentration exhibits the highest effect in slowing the development of eggs at 61.9 percent undevelopment, followed by T2, T4 and T3 with 50%, 47.1% and 46.6% respectively. In addition, T1 was found to have caused death to eggs at 18.6% which is much lower as compared to the ovicidal ability of Albendazole at 74.1%. This study indicated that the *T. indica* crude leaf extract can be used to prevent *A. galli* eggs development to L3 stage. However, supplementation may be added to increase its efficacy.

Keywords: *Gallus gallus domesticus*, *Ascaridia galli*, eggs development, *Tamarindus indica* crude leaf extract

## TABLE OF CONTENTS

Title Page	1
Abstract	2
Table of Contents	3
<b>CHAPTER 1 INTRODUCTION</b>	
1.1 Background of the Study	8
1.2 Conceptual Framework	11
1.3 Statement of the Problem	12
1.4 Hypotheses	12
1.4 Scope and Limitations	13
1.6 Significance of the Study	13
1.7 Definition of Terms	15
<b>CHAPTER 2 LITERATURE REVIEW</b>	
2.1 Conceptual Literature	17
2.2 Related Studies	22
<b>CHAPTER 3 METHODOLOGY</b>	
3.1 Research Design	26
3.2 Research Setting	26
3.3 Research Procedure	27
3.4 Data Gathering and Statistical Analysis	31

CHAPTER 4 RESULTS AND DISCUSSION

4.1	Results	33
4.2	Discussion	41

CHAPTER 5 SUMMARY, CONCLUSIONS AND RECOMMENDATIONS

5.1	Summary	46
5.2	Conclusion	47
5.3	Recommendations	48

	Cited References	49
--	------------------	----

Appendices

A.	Standard Procedure	56
B.	Life Cycle of <i>Ascaridia galli</i>	59
C.	Morphological Characteristics of <i>A. galli</i> eggs	60
D.	Photomicrograph of <i>A. galli</i> eggs development stages on 10 <sup>th</sup> , 14 <sup>th</sup> and 21 <sup>st</sup> day of observation	61
E.	Statistical Analysis of Data	64
F.	Photo documentation	70
G.	Budgetary Requirements	75

	Curriculum Vitae	76

### LIST OF TABLES

1. Mean percentage of undeveloped *A. galli* eggs counted during the 10<sup>th</sup>, 14<sup>th</sup> and 21<sup>st</sup> day of incubation in different treatments 33
2. Comparison of the percent of undevelopment of *A. galli* eggs observed on the 21<sup>st</sup> day of incubation in different treatments 36
3. Comparison of the percent of development of *A. galli* eggs observed on the 21<sup>st</sup> day of incubation in different treatments 37
4. Efficacy of *T. indica* leaf extract at different concentrations against the development of *A. galli* eggs 39

## LIST OF FIGURES

1. The life cycle of *Ascaridia galli* 59
2. Morphological characteristics of *Ascaridia galli* 60
3. Photomicrograph of *A. galli* eggs development stages on 10<sup>th</sup>, 14<sup>th</sup> and 21<sup>st</sup> day of observation 61
4. *Tamarindus indica* tree 70
5. Collection and preparation of eggs photodocumentation 71
6. Collection and preparation of *T. indica* leaf extract photodocumentation 72
7. Preparation of different concentrations and exposure of eggs to treatment photodocumentation 74
